

## VOLTAGE FREE INTERFACE FOR SMARTSCAN

### SPECIFICATION

- The Interface allows control of SmartScan installations using volt-free inputs  
For example - switching all SmartScan lighting to permanent ON, overriding automatic control if the fire alarm switches into alarm state.
- The Interface can be used to control individual switching groups or multiple groups on a SmartScan mesh network
- LED indicator shows the current configuration of the lighting (if a latching input is used)
- Can initiate testing of emergency luminaires
- Can be operated with latching or momentary close inputs
- 24 inputs providing 10 group commands, 3 ColourActive group commands and 11 global commands
- Programmable using the SmartScan Programmer
